

## **PHASE 6: PROJECT TESTING PHASE**

### **6.1 Data Import Testing**

After the transformation is completed, the Employee Test table is opened to verify whether the employee records have been successfully created.

The imported records are checked against the original spreadsheet data.

### **6.2 Coalesce Testing**

Coalesce is configured to prevent duplicate employee records when the same employee data is imported again.

A field is configured with Coalesce = True in the Transform Map. This allows existing records to be identified during subsequent imports.

### **6.3 Insert and Update Testing**

Additional Excel data is imported to test how the system handles existing and new employee records.

In the documented test:

- 4 rows were uploaded.
- 2 new employee IDs were inserted.
- 2 existing employee records were updated.
- The updated records contained changed Name and Email values.

### **6.4 Duplicate Testing**

The same Excel sheet is uploaded again using the same Transform Map.

The Transform History shows that the repeated records were ignored rather than creating additional duplicate records. In the documented test, all 4 rows were ignored.

## **6.5 Testing Result**

- The testing confirms that the project can:
- Import new employee records.
- Update existing employee records.
- Identify repeated records.
- Avoid unnecessary duplicate records through Coalesce.
