

PHASE 8: PROJECT DEMONSTRATION PHASE

8.1 Demonstration Objective

The final demonstration presents the complete workflow of importing employee data into ServiceNow and managing the imported records.

8.2 Demonstration Flow

The project can be demonstrated in the following order:

Step 1: Show the Spreadsheet

Display the Excel spreadsheet containing employee information.

Step 2: Show the Employee Test Table

Display the custom ServiceNow table and its fields.

Step 3: Show the Import Set

Demonstrate how the spreadsheet data is loaded into the Employee Import table.

Step 4: Show the Transform Map

Display the Sample Spreadsheet Import Transform Map and its field mappings.

Step 5: Run the Transformation

Execute the Transform Map and show the successful transformation.

Step 6: Verify Employee Records

Open the Employee Test table and demonstrate the imported employee records.

Step 7: Demonstrate Coalesce

Import existing and new employee records and show how the system handles updates and prevents duplicate records.

Step 8: Demonstrate Reports

Show the three reports:

- Employees by Department
- Employees by Location
- Employee List Report

Step 9: Demonstrate Dashboard

Finally, open the Employee Analytics Dashboards dashboard and demonstrate the reports displayed in a centralized view.

FINAL PROJECT OUTCOME

The project successfully demonstrates an employee data import and management workflow using ServiceNow Import Sets and Transform Maps. Spreadsheet-based employee information is loaded into an Import Set, mapped to the Employee Test table, transformed, and validated.

The project also demonstrates the use of Coalesce for handling existing employee records and preventing unnecessary duplicate records. In addition, Reports and an Employee Analytics Dashboard are created to provide a centralized visual representation of employee information.

Overall Workflow
